

Thermal radiators extend your awning season. One thermal radiator covers a table space for 8 to 10 persons. Power regulation is possible in three levels. It can be operated by a remote control.

BOGAFREE STANDING AWNING

Terraces are very suitable for extending your living space in summer time and to get closer to countryside. Simultaneously, the terraces must be protected from sun glare. For this purpose you can use folding-arm awnings as well as fixed awnings. Their advantage is stability and much better wind resistance. Boga awnings are unique because of their support profiles. The arc-shaped supports anchored to the wall or to the floor near the wall replace the support profiles which could be disturbing in some cases. When the awning is not used, the fabric can be retracted into a protective box.

... more about the product.

Pergola construction:

- arc-shaped support profiles standard colours: white, aluminium, structured anthracite
- the fabric projection is ensured by a gas mechanism
- anchoring onto the wall / to wall and floor
- max. width 500 cm, max. projection 400 cm

 lamp mounting profile illuminating the space under the awning and after dawn and creating pleasant atmosphere

Do you know...

... that sun's rays fall into various radiation bands? Do you know that this radiation is dangerous?

The awning fabrics delivered by our company have UV protection factor ensuring safety for your skin!

UV-C radiation

(radiation range 200 - 280 nm)

Highly energetic, short-wave radiation hindered by the ozone layer in the atmosphere.

UV-B radiation (radiation range 280 - 315 nm)

Radiation component causing burnt and

damaged skin.

Partially co-responsible for sun burning and skin damage.

Visible light

(radiation range 380 – 780 nm)

Radiation visible by human eye.

Infrared radiation (radiation range 780 – 2500 nm)

Thermal radiation.
