

INTERIOR FABRIC SHADING

4
YEARS
WARRANTY

DECORATIVE ELEMENT OF EVERY HOME

Interior fabric shading effectively regulates the amount of light in the room and contributes to the atmosphere of every home. It is an ideal addition to external shading. You can choose from a wide range of colours, patterns and fabric types, as well as types of shading. Whether you select fabric roller shutters, vertical blinds, pleated blinds or Japanese sliding panels. Every type of shading is made to measure with a 4-year warranty.

CLIMAX INTERIOR FABRIC SHADING

- traditional way of shading interiors
- regulate the amount of light and complete the harmony of the entire interior
- they are suitable for all types of windows
- with a suitably chosen type of blind and fabric, they prevent the interior from overheating

Main advantages

Elegant accessory

Protects privacy
and against the sun

Shading of large areas

Main types of interior fabric shading

Fabric roller shutters

Climax fabric roller shutters protect against the sun rays and curious neighbours.

They smoothly regulate incoming daylight in the interior. They are not only suitable for apartments and houses but also commercial buildings. Thanks to a rich selection of fabrics, you can combine them precisely in the room. They give a living room a level of cosiness, while supporting creativity in the children's bedroom. Climax also manufactures night and day fabric roller shutters. On the Varieta roller shutters with Zebra fabric, full stripes interchange with transparent ones.

Vertical blinds

Vertical blinds are a decorative and practical shading element. They are ideal for shading French windows, sliding doors or large glazed areas. They find their use not only in households and offices but also in schools and hospitals. Vertical blinds are also suitable for partitioning large floor areas, such as corridors, halls, schools and healthcare facilities.

Pleated blinds

Pleated blind is characterized by a pleated fabric. Unlike other types of fabric shading, it can be pulled in both directions on the window. It is an elegant and practical solution for shading all types of windows. It will fit perfectly into any atypical window shape, with a diagonal or arch. It is suitable for apartments, family homes and offices.

Pleated blinds can also be used to shade roof windows and conservatories.

Japanese sliding panels

Japanese sliding panels from Climax are a modern method of interior shading. Japanese sliding panels comprise of fabric panels and a riding rail.

In households, they can easily provide shading to large glazed surfaces. They are also suitable for separating areas in an apartment or room and for partitioning corridors, halls, large offices, areas in hospitals and schools.

Fabric roller shutters for roof windows

FANTAZIE

TITAN

Pleated blind

It's characterized by its variability. It is an ideal type of shading for any atypical window shape and window with diagonal. Pleated blinds can also be used to shade roof windows and conservatories.

Vertical blinds / Japanese sliding panels

Both of these types of interior fabric shading are suitable for optical division of a room. They can also be used in offices, surgery or schools.

Types of fabric

Transparent

Transparent fabrics are used as a decorative accessory. They can make every interior cozy and color complete.

Semi-transparent

Semi-transparent fabrics are being used mainly for shading, but at the same time partly still transmit light into the room.

Complete black out (blackout fabric)

Complete blackout fabrics will not release any light into the room. They are used wherever you are after a complete darkness.

Fabric roller shutters varieta zebra

Fabric roller shutter Zebra is also known as the night and day type. The double fabric provides two functions at the same time. When the full bands overlap, light enters the room over transparent bands.

Control types

Manual - crank with gearbox
Motoric - electric motor 230 V
with the possibility of control with:

- switch
- automatic control
- remote control
- smart mobile device
(Tahoma system)
